LEARNING ACTIVITY 13

Tower Building Challenge

Your child can learn about balance while practicing their procedural writing skills by completing a tower building challenge. Encourage them to use various materials to create a tower and see how it withstands weight placed on top of it. They will need to think creatively to build the best—and tallest—tower they can!

Gather Materials

- Gather plastic cups, large popsicle sticks, and any other building materials you can find.
- Find a small plastic toy that will sit on top of the tower.

Let’s Build

Challenge your child to build the tallest tower they can with these materials. Once they finish building, place the toy on top.

What happens? If the tower falls, ask them how they can rebuild it to be more balanced. If the tower does not fall, challenge them to create an even taller tower!

Try balancing toys of different shapes or sizes to see how each tower holds up. Ask your child to write the steps they took to complete this challenge.
